

Coding Project for October(Interview)

- Person would want a working bank Platform on Html
 - The html webpage should have photos that support the introductory on the webpage
 - Should also have a video that supports the security and the popularity of the bank
 - Should have a working navigation bar at the top that can access stocks, news and the homepage
- Would also want a working Bank on Python
 - The bank should be an almost fully functional and interactive bank with minor bugs or problems.
 - It should be able to give at least 4 people the ability to use and perform actions with the bank
 - Actions include:
 - Transactions
 - Deposits
 - Balance checking
 - Cancellation
 - During Transactions, Users must be able to:
 - Enter their given pin (at least once)
 - Be able to transact money that is available in their bank account
 - If there are not sufficient funds in their account, they should be informed and the program should be stopped

- At the end of the transaction, be able to show how much was transacted, and how much money is left in their bank account
- During deposits, Users must be able to:
 - Enter their given pin again
 - Be able to deposit money at a time into their bank account
 - Be able to be shown how much has been added and what their new balance is
- During Balance checks
 - Users will be shown their account balance
- During cancel operations
 - A text should be shown to the user telling them that the program will be closed
- ALL OF THESE FUNCTIONS SHOULD BE CAPABLE OF BEING USED BY 4 PEOPLE OR MORE
